Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1,4,5,6,10,11,15,16,17,18,19, 21, and 23 are rejected under 35 U.S.C. 102(e) as being anticipated by Carsello(US 6,529,566 ^{See (2105)A} ~~new one~~).

The reference by Carsello discloses a means for detecting/classifying a transmitted modulated waveform, see abstract and figure 2 and 3, figure 3 showing the hardware for receiving a baseband signal(first signal) having a waveform with a portion that repeats(see col. 4, lines 19-39);i.e, when repeated symbols occur then the corresponding waveforms will also inherently have repeated portions.

A delay means(302) that delays the first signal an integer number of predetermined intervals(see col. 4, lines 59-65), to produce a second signal which is combined with the first signal(via 318). A correlation signal is produced on the output of 318 and provided to an evaluation and detection means including(320 and 322), threshold detector is provided with a predetermined threshold and a pulse is outputted only when the correlation signal is greater. There is no demodulation of the waveform only classification of the type of waveform as a function of the

interval delay. Note in col. 4, lines 10-17, frequency offset for FSK is discussed with respect to DC offset, no compensation for frequency offset is required.

Allowable Subject Matter

3. Claim 2,3, 7,8,9,12-14, and 22 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The examiner could not find fair suggestion for a plurality of correlation signals, nor the blocks of known and unknown data, and filtering the correlation signal.

Response to Arguments

4. Applicant's arguments filed October ' 03 have been fully considered but they are not persuasive. The examiner has considered applicants' remarks about the reference not showing a waveform that repeats, however, examiner did note that the symbols do repeat and thus the inherent waveform for those symbols will also repeat periodically.

Conclusion

5. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37

Art Unit: 2817

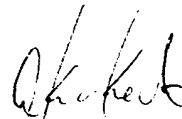

CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
